# *Memo*

To: Board of Directors
From: Tom Weddle, General Manager
Date: 11/17/26
Subject: Manager's Reports

**Field Manager**
We have finally got the permit situation with the County resolved. A little work on both our parts. The fees are now down to $66 each. We have been asphalting weather permitting us to catch up.

Our biannual flushing program has begun.

PFAS came back for Old Mill Springs wells as we suspected because of the old dump off Old Mill Rd. We reported it to our engineer after shutting down the well heads of the triggered wells above the federal MCL. We have been looking into filtration for them if we had to. Luckily, these do not produce much so it is not a large loss.

Electra Vert update: We still cannot get a hold of anyone by email with whom we were working. Mike Casas decided to see if he could find other companies. He found one and they want us to resample so they can help us get rid of the filters.

**Funding Request**
Our Fiscal Year 2027 funding request remains in place. With the Democrats taking the House and the Senate, there will be a split government for the next two years. Projects included in this year's House appropriations bills will remain in those bills, however. These requests were submitted with support from members of both parties, and local community project funding has historically maintained bipartisan support through changes in congressional control. Our funding is more likely than not to go through for the Wylerhorn project for fiscal year 2027.

We have laid the groundwork for FY 2028. We were told that getting support for a project that is continuing is highly likely to get more appropriations do to the fact that completed projects look good for both the grantee and the grantor. For this reason, we will be asking for funds that will help us continue and hopefully complete all the necessary upgrades for the Wylerhorn project.
